

Harry & Cathy Holzmann

**“Blue Mountains Fuel Injection”** Our ABN:- 23 905 577 379

New Workshop now with Dyno Tuning at 59-63 Megalong Street, Katoomba;

**Fuel Injection & Fuel Catalyst Specialist.**

Call W'Shop 02 **4784 2100** Fax No:- 02 **4788 1331**; or Harry's Mobile:- **0412 399 553**;

E-Mail Address:- [bmfi@acay.com.au](mailto:bmfi@acay.com.au) web presence [www.performafuel.com](http://www.performafuel.com)

**Mobile Fuel Injection Servicing for your Clients to ensure their satisfaction**

The best possible result is achieved by leaving the injectors on the vehicle and performing an 'On Vehicle Flush' which not only cleans the injectors and restores good spray pattern to these important items in your fuel injected car, but also to clean carbon from the inlet valves and combustion chamber to restore good engine breathing and to reduce the incidence of pinging. Engine cleanliness is also enhanced and we recommend, if an oil change is due, it should be done after the service as a small amount of contamination does have a chance to get into the oil during the service. New or fresh oil is not adversely affected. We are also checking and cleaning the Fuel Pump, fuel lines, fuel rail, Pressure regulator and sensors and computer operation etc. We also check for any air leaks, EGR leaks and calibration. See below \*\*\*

Cost for the FUEL SYSTEM SERVICE on 4cylinders.....	<b>\$250.00</b>
6 Cylinders.....	<b>\$275.00</b>
8 Cylinders.....	<b>\$300.00</b>
The above is for EFI engines, For <b>K-Jetronic</b> (i.e. Mechanical injection) add	<b>\$60.00</b>

\*\*\* For **calibration of Air flow Meters** if required with older engines, please allow **\$45.00 to \$60.00**, and would be an **extra** charge along with the EFI Service.

The above servicing takes 1.5hrs (4cyl) –2hrs (V8), and for replacing injector seals or other work associated with the servicing, replacing sensors or cracked hoses, etc. please allow \$88.00 per hour extra work. Fuel pump pressure and flow test only (no servicing)... **\$45.00**

We can also perform a similar service with Diesel engines, with the use of special diesel flushing chemicals and the inlet valves are cleaned by spraying a special mixture into the inlet tract, which is drawn in, while the engine is running. This service also helps to destroy Diesel Bug infestations and with regular use of the Inter-Ject Diesel Care & Cure will keep it under control. Also very good in overcoming smoking engines due to poor breathing, (insufficient air getting into the engine)

Cost of Diesel Service... **4 cyl = \$210.00; 6 cyl = \$230.00, 8 cyl = \$280.00** in Automotive type applications. For bigger engines in buses and trucks, due to the variety please call for a price. *Automotive Servicing (up to Toyota Landcruiser) = 1hrs; some V8's take 1.5 hrs*

Special Mention:-

We have also noticed that our *PerformaFuel* installs bring about the best improvements if combined with a FUEL SYSTEM SERVICE, due to the engine being clean and carbon has been removed. The carbon removal enables the better combustion afforded with the catalyst fit-up straight away, and you can expect between 15-20% better economy with having a **Fuelmate** Fitted.

***FuelMate* Catalysts provide... Economy, Performance & Protection**
