

FUELMATE

For Carbi or Injection

PERFORMANCE +

The *FUELMATE* combustion catalyst varies in size to suit the engine requirements, and is plumbed into the fuel line and attached to the engine. It relies on engine vibration to activate the release of minute special tin alloy particles that mix with the fuel. The tin alloy particles, during the burning process creates a catalyst reaction causing an extended and more complete combustion. During this process the tin oxidises and leaves....

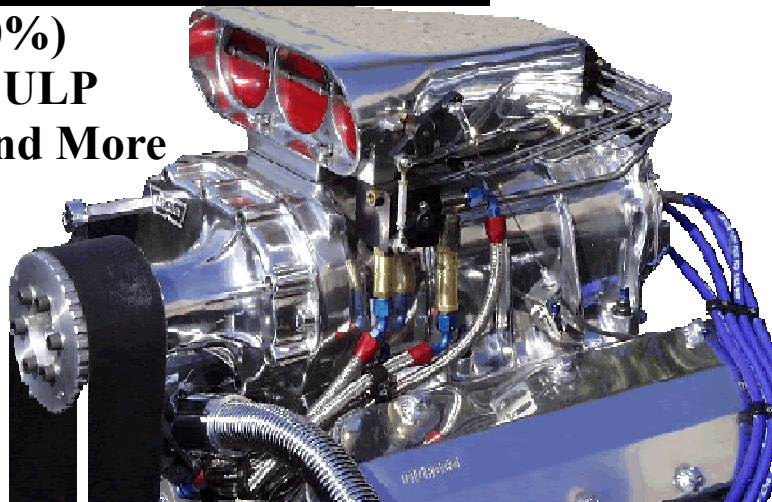

...a protective coating on the engine components. With the extended and more complete combustion comes the increase in Power and anti-detonation benefits.

**THE BEST BOLT ON INVESTMENT YOU CAN BUY
FOR YOUR PERFORMANCE ENGINE**

FUELMATE FUEL COMBUSTION CATALYSTS

- ★ Bolt on Power (Some Up To 10%)
- ★ Allows Leaded Cars To run on ULP
- ★ Bolt on Economy up to 10% and More
- ★ Bolt on Engine Protection
- ★ Lubricates Valves and Guides
- ★ Removes Carbon Build Up
- ★ Controls The Burn Rate
- ★ A Remedy For Detonation
- ★ Perfect With Turbo Charging
- ★ Excellent For Super Charged Engines
- ★ Better Throttle Response
- ★ Reduces Harmful Emissions Up To 30%
- ★ No Adjustments Necessary
- ★ 5 Year 500,000 Kilometer Warranty
- ★ Fantastic 6 months Satisfaction Money Back Guarantee

A MAJOR BENEFIT FOR ALL HIGH PERFORMANCE ENGINES
